(a) one particle of each kind (dots every 0.25 s)
spark: g, drag $e^{-0.4\Delta t}$, bounce ×0.25
ember: $0.6g$, $e^{-0.3\Delta t}$
fire: rises $+2\Delta t$, $e^{-1.8\Delta t}$
smoke: buoyant ≤ 3 m/s, drifts with wind
dust: $e^{-1.6\Delta t}$
height (m)
horizontal distance (m)
(b) debris: 1/120 s steps, restitution 0.3, friction 0.7, at rest below 0.25 m/s
height (m)
speed (m/s)
time (s)
